

# CYBER THREAT INTELLIGENCE FOR GOVERNMENT

## See more with iSIGHT Partners

iSIGHT Partners provides non-classified, proprietary intelligence and analysis when you need it most. There are threats beyond the aperture of your vision. These threats rely on the vulnerabilities of your system, processes, and people to seek out and compromise valuable assets and resources. While you have to be right 100% of the time, the adversary only needs to be right once. iSIGHT Partners works with your security operations, investigations, and analysis teams to allow for better coordination of actions through intelligence-led security strategies and to inform executives and policy-makers of key successes. Due to existing contracts, most government cyber security teams are already covered.

### iSIGHT Partners Allows Your Team to:

-  Understand your threat environment by analyzing threat sources that use common techniques to achieve common impacts
-  Understand the threat landscape you operate in and uncover evidence of previously unknown activity
-  Identify threat source activities that assist in creating and employing appropriate security controls relevant to your unique environment
-  Add threat context to technical indicators, alerts, and log entries to allow for prioritization of resources

### ThreatScape Intelligence Relevant to the Government Sector:

-  **CYBER ESPIONAGE.** ThreatScape<sup>®</sup> Cyber Espionage focuses on providing intelligence on targeted intrusion operations aimed at corporate and government entities to collect information for the purpose of a strategic advantage. iSIGHT Partners proprietary intelligence reporting enables identification and mitigation of these threats in order to reduce risk through augmented enterprise security posture.
-  **HACKTIVISM.** ThreatScape<sup>®</sup> Hactivism focuses on intentions and capabilities of politically or ideologically motivated actors, who express their beliefs or attempt to project power through malicious or destructive online activity. iSIGHT Partners cyber threat intelligence identifies and tracks hactivist threat sources in order to provide warning, context and attribution of threat incidents.

Contact iSIGHT Partners for details on additional ThreatScape<sup>™</sup> Intelligence offerings

From verified indicators to deep context, and against threat sources of any size, iSIGHT Partners ThreatScape<sup>®</sup>, ThreatService<sup>™</sup> and ThreatSPACE<sup>®</sup> offerings provide government cyber security teams with the intelligence, analysis, and training they need to protect critical resources.

**"I'm continually impressed with the amount of actionable information available in the reports. We have been able to take a lot of the indicators and incorporate them into our cyber defense tools."**

United States Federal Civilian Agency

## Intelligence-Led Security Solutions

**ThreatScape**<sup>®</sup> intelligence arms organizations with tactical, operational, and strategic insights and forms the basis for connecting the security operation to the enterprise.

**ThreatService**<sup>™</sup> offerings inform organizations about the actual threats targeting them while enabling threat management based on in-depth analysis. iSIGHT Partners ThreatService<sup>™</sup> offerings also allow organizations to integrate intelligence into their security operations and cyber risk management programs.

**ThreatSPACE**<sup>®</sup> cyber exercises provides a live-fire cyber range to perfect threat management and incident response. The ThreatSPACE<sup>®</sup> Range and Training Facility includes environments that support an extensive range of topologies and targets that can be designed to emulate nearly any industry or government office.

**iCRMS**<sup>™</sup> automatically routes intelligence to operators and managers using iSIGHT Partners' patented technology for incident handling and threat mitigation. This system enhances decisions such as threat prioritization and mitigation and enables increased awareness of countermeasure value.

These intelligence-led security solutions empower organizations to understand their cyber threat reality, bolster existing teams with actionable intelligence, and enhance readiness to proactively prevent mission impact.

## Bottom Line

Without true intelligence containing more than just technical insights, government offices are simply deploying defenses blindly. iSIGHT Partners enables an intelligence-led security practice that connects awareness of the threat to all facets of the organization.

## About iSIGHT Partners

iSIGHT Partners is a global cyber threat intelligence firm that delivers actionable intelligence products and services to leading enterprises in business and government. With a global network of security analysts and geographic research and analysis centers in Washington DC, The Netherlands, Brazil, Ukraine, India and China, iSIGHT Partners is uniquely positioned to monitor and mine the cyber threat ecosystem and deliver proprietary intelligence products and services specific to the threats its clients face.
