

# THREATSCAPE® INTELLIGENCE PRODUCTS

## Cyber Intelligence That's Actually Intelligent

iSIGHT Partners ThreatScape® intelligence arms enterprises with actionable knowledge and context about cyber threats and their methodologies.

This actionable intelligence is delivered as reporting in a variety of formats – connected to observables, indicators, and metadata – that describe, explain, and predict the current and impending threats. Each report is shaped from the unique expertise of the iSIGHT Partners' team around the world with the local language, dialect, and culture necessary to truly comprehend the global threat.

ThreatScape intelligence is not just about data, but rather arming enterprises with tactical, operational, and strategic insights fused to knowledge and context. The understanding of aspects like the motivation and intent of threat sources, the malicious and compromised infrastructures used for attacks, and the vulnerabilities and the malware targeting, them provides a holistic view of an enterprise's threat reality.

### Our Intelligence enables clients to:

- ✔ Decisively prioritize patching of known and unreported vulnerabilities being exploited
- ✔ Proactively prepare security operations for actual ongoing and emerging attacks
- ✔ Hunt for additional potential indicators of attacks within an enterprise
- ✔ Arm decision makers with analysis that addresses identified and credible threats

iSIGHT Partners uses proprietary sources and methods to continuously research and analyze threats to meld raw data and information into an unparalleled cumulative understanding of threats targeting entities throughout the world. The result – ThreatScape intelligence – forms the foundation by which clients can wholly understand the many threats they face and begin to organize technical and operational countermeasures in order to protect their business.

### Current ThreatScape® Intelligence

- Cyber Crime
- Cyber Espionage
- Distributed Denial-of-Service
- Enterprise IT Management and Investment
- Hactivism
- Industrial Control Systems
- Mobile Threats
- Vulnerability and Exploitation

**“iSIGHT’s threat intelligence allows our users to prepare for, detect and respond to emerging threats all within one platform and without any additional effort.”**

**MICHAEL VISCUSO**  
 CEO  
 Carbon Black

## Other Intelligence-Led Security Solutions

**ThreatService**<sup>™</sup> offerings inform organization about the actual threats targeting them while enabling threat management based on in-depth analysis. iSIGHT Partners ThreatService<sup>™</sup> offerings also allow organizations to integrate intelligence into their security operations and cyber risk management programs.

**ThreatSPACE**<sup>®</sup> cyber exercises provides a live-fire cyber range to perfect threat management and incident response. The ThreatSPACE<sup>®</sup> Range and Training Facility includes environments that support an extensive range of topologies and targets that can be designed to emulate nearly any industry or government office.

**iCRMS**<sup>™</sup> automatically routes intelligence to operators and managers using iSIGHT Partners' patented technology for incident handling and threat mitigation. This system enhances decisions such as threat prioritization and mitigation and enables increased awareness of countermeasure value.

## Bottom Line

Without true intelligence containing more than just technical insights, organizations are simply deploying defenses blindly. iSIGHT Partners enables an intelligence-led security practice that connects awareness of the threat to all facets of the business.

## About iSIGHT Partners

iSIGHT Partners is a global cyber threat intelligence firm that delivers actionable intelligence products and services to leading enterprises in business and government. With a global network of security analysts and geographic research and analysis centers in Washington DC, The Netherlands, Brazil, Ukraine, India and China, iSIGHT Partners is uniquely positioned to monitor and mine the cyber threat ecosystem and deliver proprietary intelligence products and services specific to the threats its clients face.
